- John:** What happened?
- Sally:** Vanessa sprained her ankle and the rangers airlifted us off the cliff.
- John:** Wow! Sounds crazy!
- Sally:** How was your trip to Machu Picchu? How far is it from Lima?
- John:** Machu Picchu sits on a mountain, about 300 miles from Lima. We took a bus along twisty roads through villages.
- Sally:** How interesting!
- John:** Yeah, the altitude is 7800 feet, so some of the tourists got altitude sickness.
- Sally:** Altitude sickness?! Is that right?

Learning Points

Saying How Far a Place Is

When you want to know how far a place is, you can use the question: *How far is ...?* You can reply with a specific distance if you know the answer, like *It's 50 yards away*. In the USA, you use the Imperial system, not the metric system. If a place is nearby, you use *yards* to say how far it is. If a place is far, you use *miles* to say how far it is.

Imperial System	Metric System
1 mile	1.6 kilometers
1 yard	90 centimeters
1 foot	30 centimeters
1 inch	2.5 centimeters

Showing Interest

You use these phrases and techniques to show interest and surprise in conversation:
